

Ideal for the textile industry: P-type measuring strips from ibv

ibv's P-type measuring strips are especially inexpensive because they are made of paper. Above all, they are ideal for monitoring temperatures in the **textile industry**. Equipped with seven to nine temperature indicators, the P-type measuring strips ensure high-precision results. They are also very easy to use: simply insert between the inlay and the outer fabric. The side with the indicator should be aligned with the outer fabric. Both fabrics can then be pressed together using the textile press. Once the textile press is opened, the measuring strip can be removed by pulling the outer fabric and inlay slightly apart at the relevant point. Once the thermal strip is removed, the temperature can be read from the coloured indicators.

Important: P-type Thermo-Strips must be protected from moisture and dirt, otherwise the measurement results may not be accurate. Short-term, moderate exposure to steam, however, is not a problem. And on request, the P-type Thermo-Strips is also available in an adhesive version and with a heat-resistant foil cover.

ibv's temperature measuring strips are available in the following temperature ranges:

Type 0	41	49	60	71	82	93	99	104		°C
Type 0.1	82	88	93	99	104	110	116	121	127	°C
Type 1	104	110	116	121	127	132	138	143		°C
Type 1N	104	110	116	121	127	132	138			°C
Type 1.1	127	132	138	143	149	154	160	166	171	°C
Type 1.1N	138	143	149	154	160	166	171			°C
Type 2	143	149	154	160	166	171	177	182		°C
Type 3	182	188	193	199	204	210	216	224		°C
Type 4	210	216	224	232	241	249	254	260		°C

- Dimensions: approx. 90 x 4 mm
- Irreversible colour change within +/- 1 second
- Pack of 40 temperature measuring strips
